Date of Discharge: *July 26 1915* Clinical Clerk. *g.c.a.*

Treatment & Diary:

July 17/15 Killian Submucous resection of septum by Dr. Rogers under local anaesthetic.

Cartilage presented a Rt & L deviation in vestibule on Rt side making resection fairly difficult. There was also a spur on the left posteriorly which probably caused most of the symptoms. Packed both nares $\frac{1}{2}$ bolus of gauze vaselined.

July 18/15 gauze removed from both nostrils and irrigated $\frac{1}{2}$ H₂O₂. Patient suffers & headache

July 22/15 Turbinotomy by Dr. Rogers, local anaesthetic.

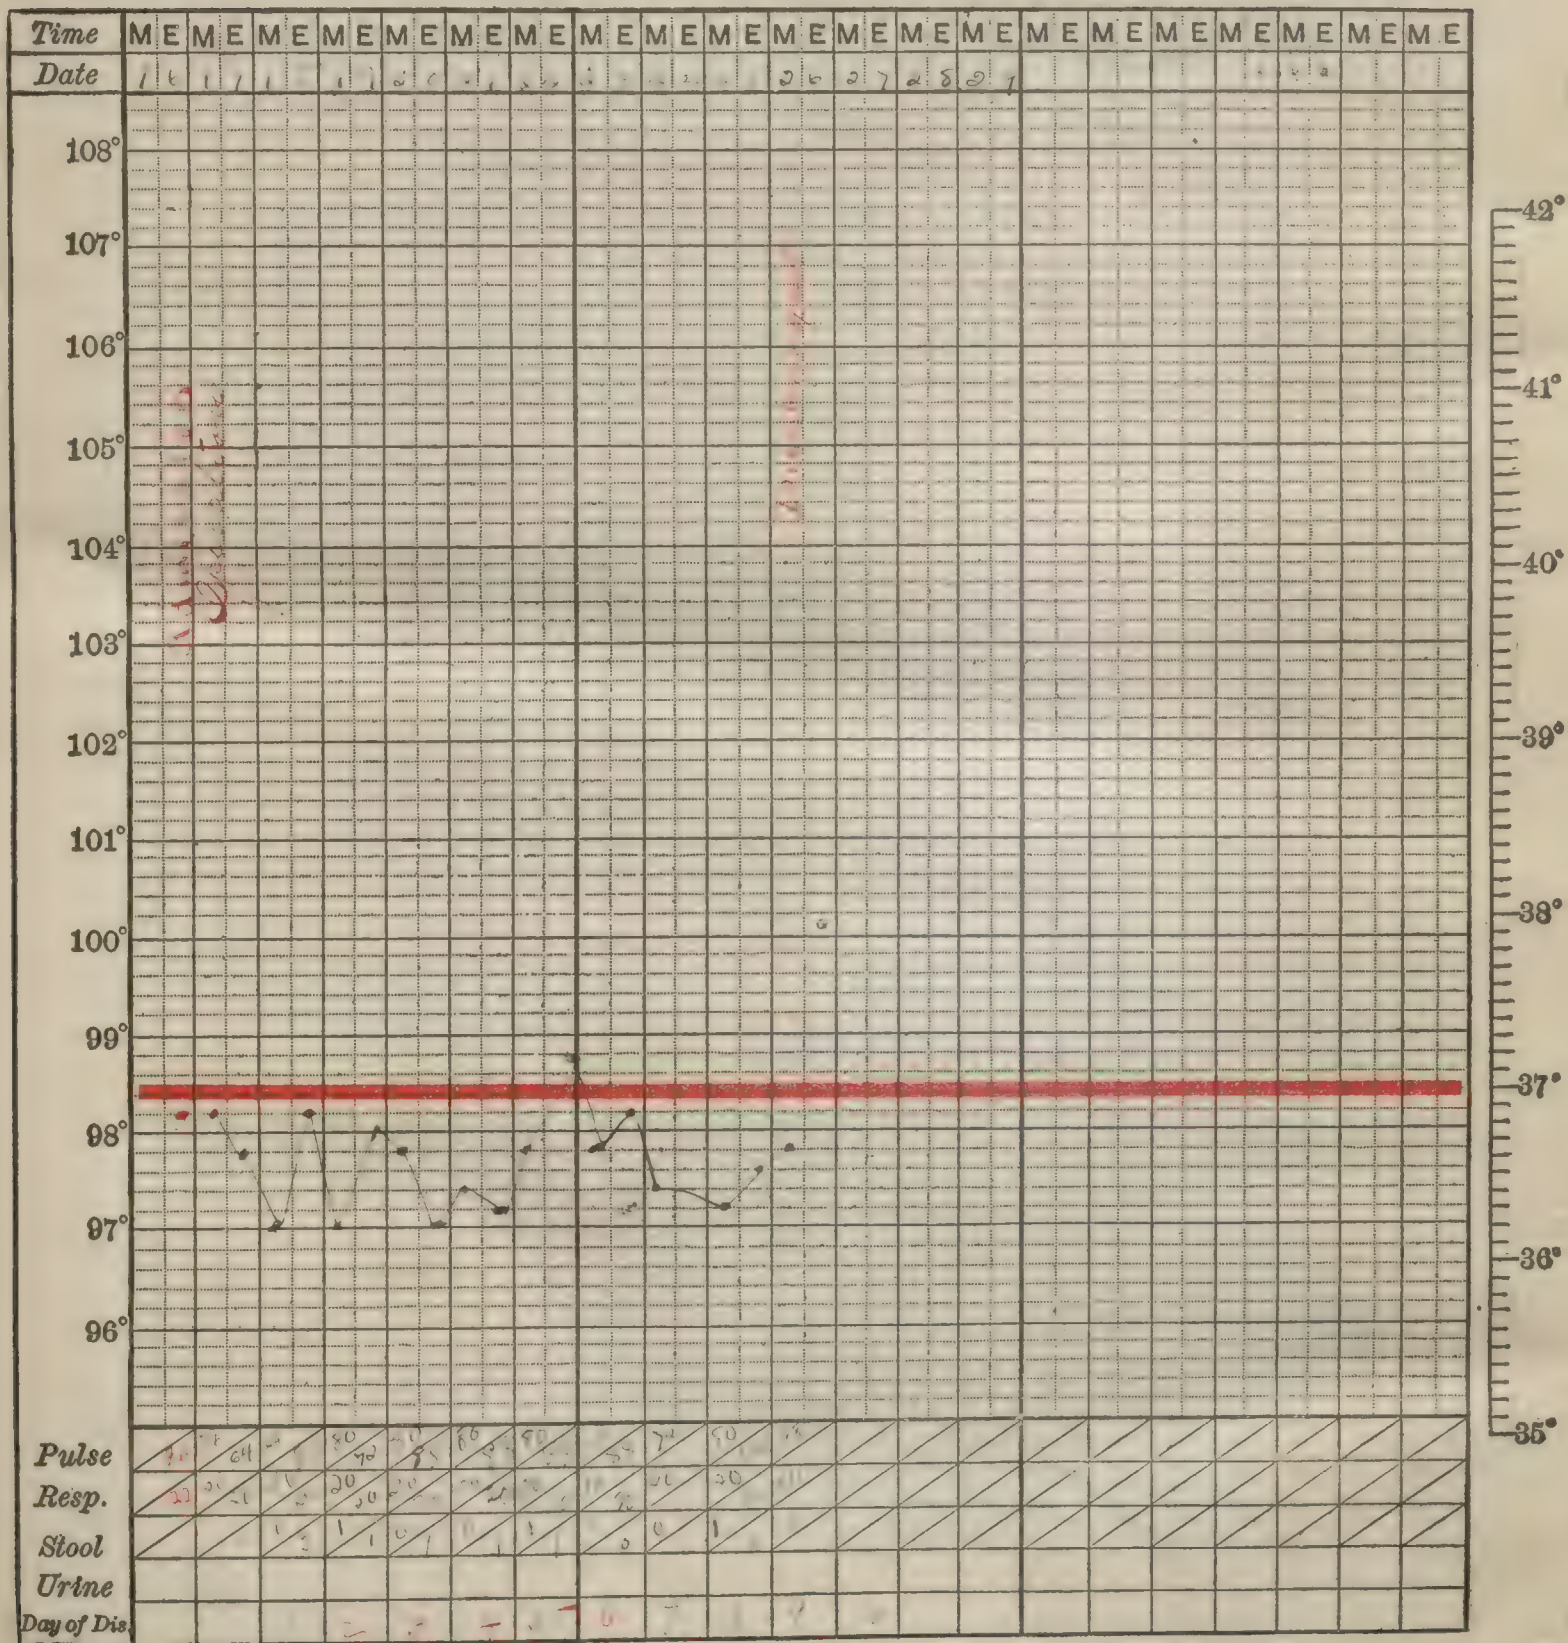

The inferior turbinate was greatly hypertrophied - Removal relieved nasal obstruction markedly.

July 26 Discharged

Treatment & Diary:

July 27/15 patient came to out door at 6 a.m. complaining of continued haemorrhage throughout the night following tonsillectomy and adenoidectomy yesterday p.m. He was admitted to ward
P120 T98'1 R 22

Examination of Throat showed left tonsil bed clean and not bleeding. The right however was filled with ill formed clot which was removed - and digital pressure applied & swab over finger.

Modified 1/8 Hypo - Ice collar - Ice to neck. Bleeding stopped but patient vomited on three occasions dark blood mixed & watery mucus.

July 27/15 7 P.M. Patient in good condition

July 28 There is a large clot in right tonsil bed - patient in good condition

July 29 Discharged

Date of Discharge: *July 30/15* Clinical Clerk.*gca.*

Treatment & Diary:

July 28 - Submucous Resection of Septum by
Dr. Jamieson - Local Anesthetic.

The operation was performed thru left
nostril where there was a decided deviation
to the left. The mucous membrane was
very adherent and dissection rendered very
difficult. The anterior portion being removed
a decided deviation was found posteriorly and
this was also dissected.

Nares packed & iodoform gauze

" 29 Gauze removed - Slight haemorrhage

Date of Discharge: *July 30 1915* Clinical Clerk. *G.C.A.*

Treatment & Diary:

July 27 1915 The tonsils were injected with
adrenalin + novocaine patient having previous
a Hypo of Morphine $\frac{1}{4}$ atrop $\frac{1}{100}$.

The tonsils were freed by dissection
and subsequently shaved.
The Rt tonsil contained actual pus while
the left was full of cheesy matter in
crypts.

Patient had no haemorrhage what-
ever - Tonsil beds swabbed w/ H_2O_2 + patient
returned to ward.

In about two hours patient complained
of much pain, a severe neuralgia affecting
all the teeth and part generally of face.
Hypo morphine gr $\frac{1}{2}$ ordered.

at night - He feels somewhat better.

July 28 - patient sitting up in bed feels very
well but throat rather sore. Local con-
dition excellent. Throat clean and very little
inflammatory reaction.

" 29 Suffering slight Diarrhoea.
Throat rather painful. Painted internally
with Iodine.

ROYAL VICTORIA HOSPITAL

General Hospital

Physical Examination :

Patient large stature, of stated age, able to walk about - in no pain.

Eyes react to light

Tongue clean - moist

Throat - full set

Glandular System: No lymphatic enlargement

Thyroid normal

Tonsils show old inflammatory signs

Breasts normal

Cardiovascular Syst - Pulse Reg, vol good, tension, art well very slightly palp.

Pericardium - normal

Lungs - no subjective symptoms

ma? There is a small tumor located over clavicle in mid clavicular line on its side. $5\frac{1}{2}$ cm. x 3 cm. in size.

Has been there about 10 yrs and has not increased in size for several years. No pain, is freely moveable over underlying tissue & not bound to underlying skin. No fluctuation probably a lipoma.

otherwise normal

abd: normal

G.U. Syst - menopause 4 yrs ago - no special symptoms

urine amber cloudy

Reac as many stars of Ca ox.

Sp gr 1.033

Some f. cells - few epith cells

alb 0

Sugar 0

Nervous Syst - mentality clear

Cranial nerves O.K. except for ringing in ears

Reflexes - all present - no patellar reflex

motor ; normal
sensory ;

Local Condition

Ear drums both appear quite normal
light reflex present in both drums. There is no
infection, no perforation, no bulging, perhaps a
slight degree of retraction.

Inflating ear with eustachian catheter and
politzer bag shows eustachian tubes clear.
Single speculum exam shows normal
movement.

Cause of Tinnitus ?

DEPARTMENT Oto Laryn Royal Victoria HospitalCase No. 6040 Hospital No.Date of Admission, Aug 4 / 1915Name (in full) Bourque Mrs MariaAddress 602-4th Ave RosemountmarriedOccupation at homeAge 22Single, Married, WidowedBirthplace IrelandReligion R.C.In service Dr. JamiesonRecommended by Q.D.Complains of the following: Growth in left nostril

History of Development of Present Condition: Patient noticed a growth much larger than the present - it started about 2 months ago, rapidly grew until it extended out of nostril to lower lip, being attached in the nose. About 3 wks it "dried up and blackened" and dropped off. Then this present tumor started and has been in every way similar the not as large. It is not painful but bleeds easily. It is a reddish color, rather soft, smooth, attached at one point to septum, and in part. Bleeds easily, and entirely fills the left nostril.

Recommended by Dr. Jamieson

Complains of the following: Pain in left side of face - discharge from left nostril.

History of Development of Present Condition: 15th March 1915, patient injured left side of face while playing out soccer - Shortly after a marked swelling appeared over left cheek near side of nose. This became very painful a dull aching pain - Vision was affected to the extent of preventing study. The pain radiated to opposite side, to bridge of nose & back of head. The last of April there was a large amount of pus escaped from nose and symptoms abated. Since then there has been little pain, but a constant discharge from

Aug 6/15 Ether given by Dr Morris

Rad Antrum operation (Caldwell-Luc) by
Dr Jamieson.

A pack of ribbon gauze placed in post nares
and gauze back of molars to absorb blood-
an incision 4 cm. In the usual gingivo labial margin
left side was made - peristomium reflected and
antrum opened. Bleeding checked & peroxide
sponges. The cavity curetted and much old granular
tissue removed. The anterior angle well removed
and opening made into left nostril - The ant
part of inferior turbinate removed - wound packed
lightly with strip of Iodoform - Three silk sutures
closed the gingivo labial margin of peristomium &
mucous membrane.

There was some discoloration and swelling of
left cheek and eye - cold compresses applied.

Aug 7 Some swelling and discoloration under eye. No
hemorrhage - Very little pain.

Aug 10/15 Discoloration gone - swelling subsiding.

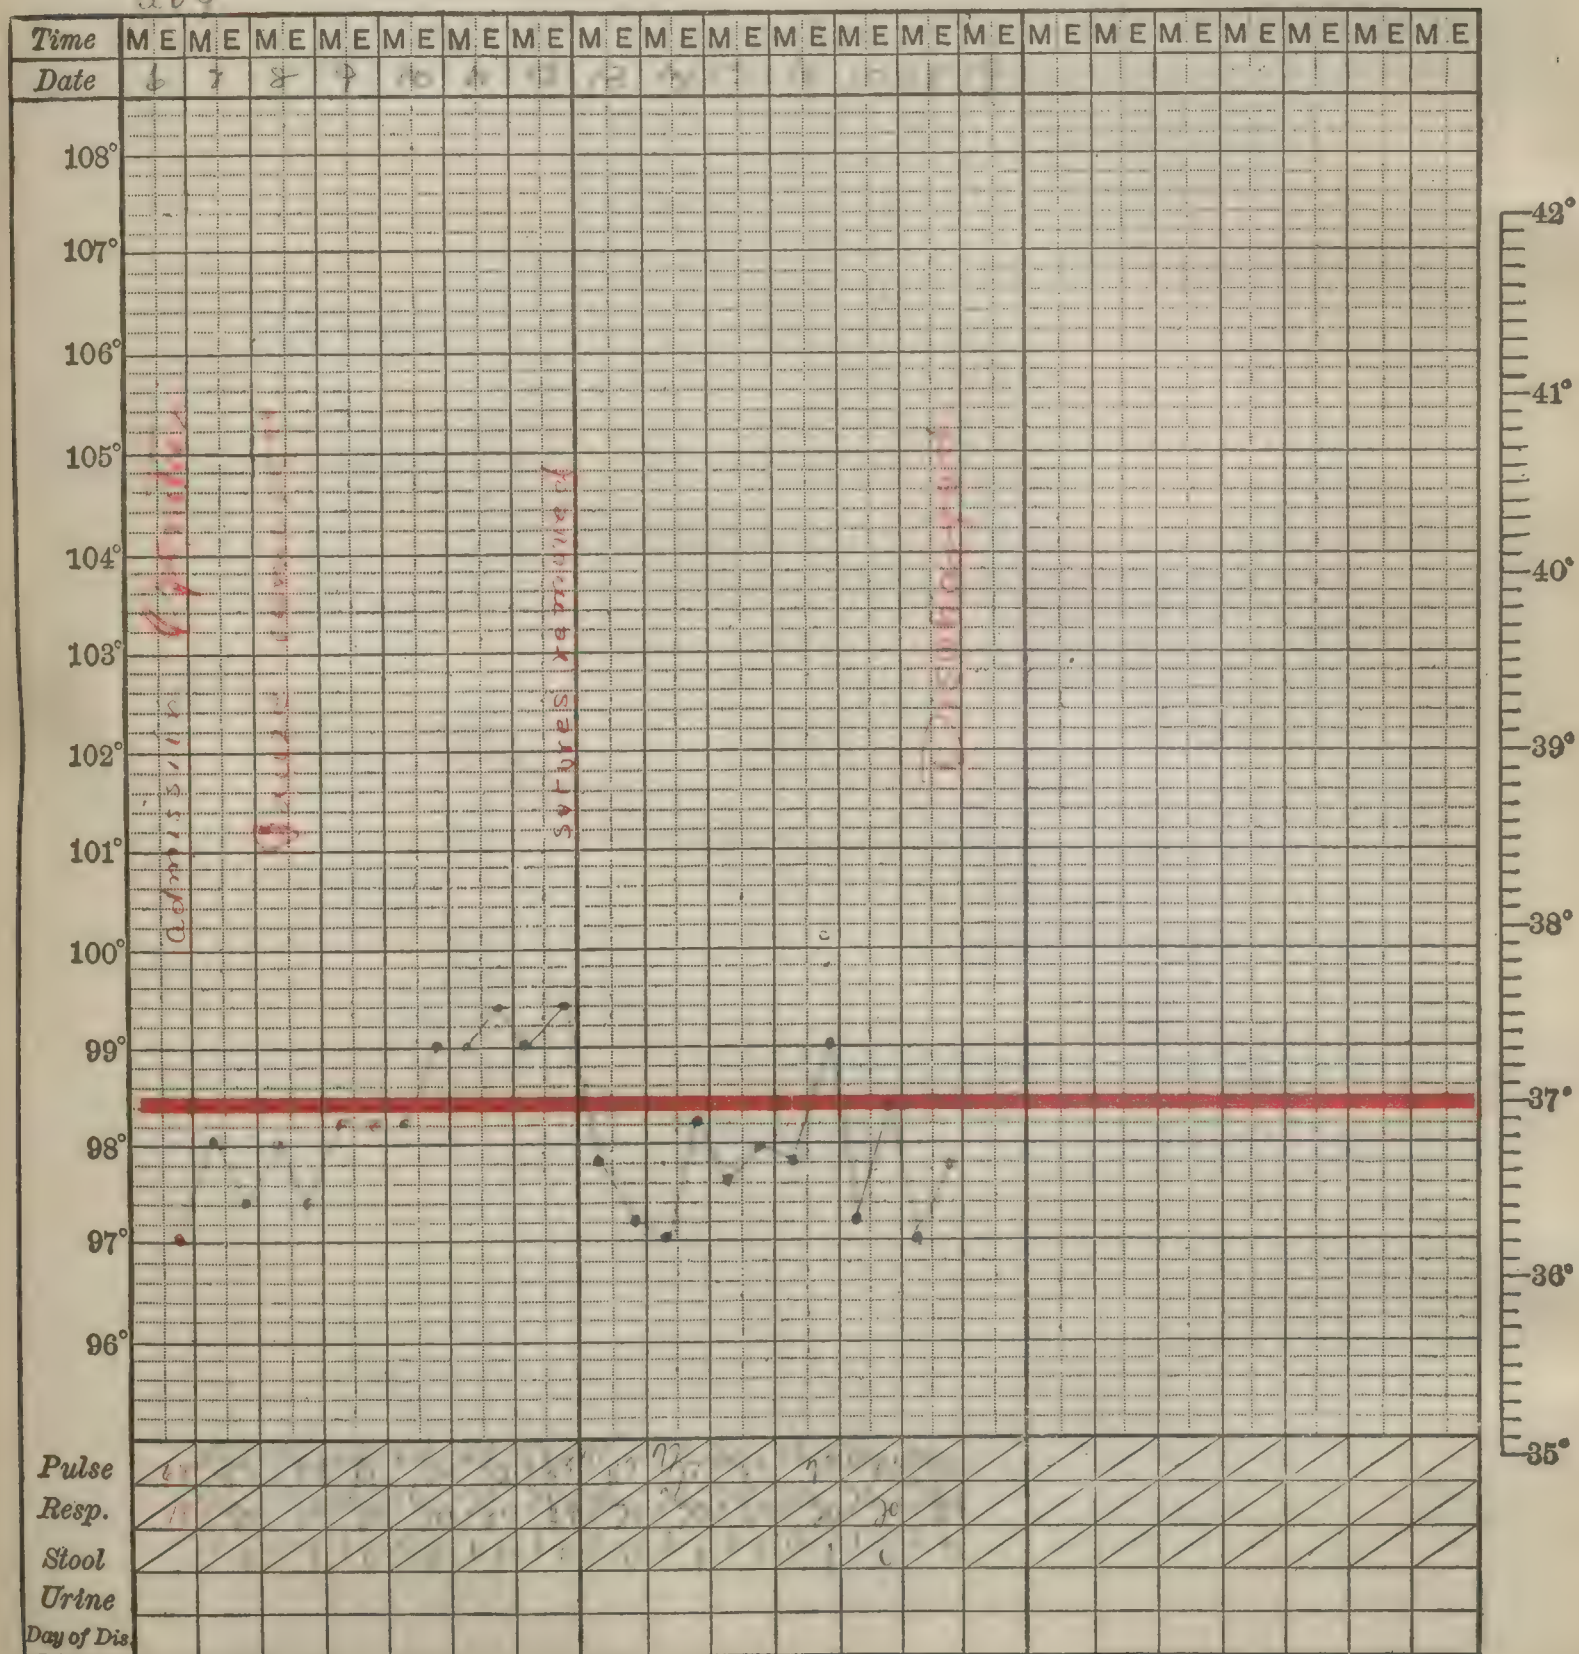

Aug 12/15 Sutures removed - wound irrigated then w
Very little mucoid pus obtained

Aug 15/15 Irrigated - no discharge

Aug 18/15 Irrigated -
pt discharged

Treatment & Diary:

Aug. 9/15 Tonsillectomy under, Dr. Jamieson
admission
ETC - anaesthesia

There was bleeding at time of
operation - checked by digital compression
Tonsils very large and diseased.

8:15 Patient vomits large amount (100g) of
blood. Hemorrhage found from both
tonsil beds - Digital comp failed to
check bleeding - Patient very weak
Dr. Fraser & Dr. Brown called - Putastimone
ordered - Dr. Jamieson called.

Hemorrhage controlled w/ tonsil clamps
& XXT intravenous given.
8:25 Tonsil bed touched with AgNO₃ - Clamp
left on left side. Hot water bottle in bed -
pulse much better -

11:00 Patient again vomiting blood - bleeding
from right tonsil bed. 3 clamps applied
to both sides -

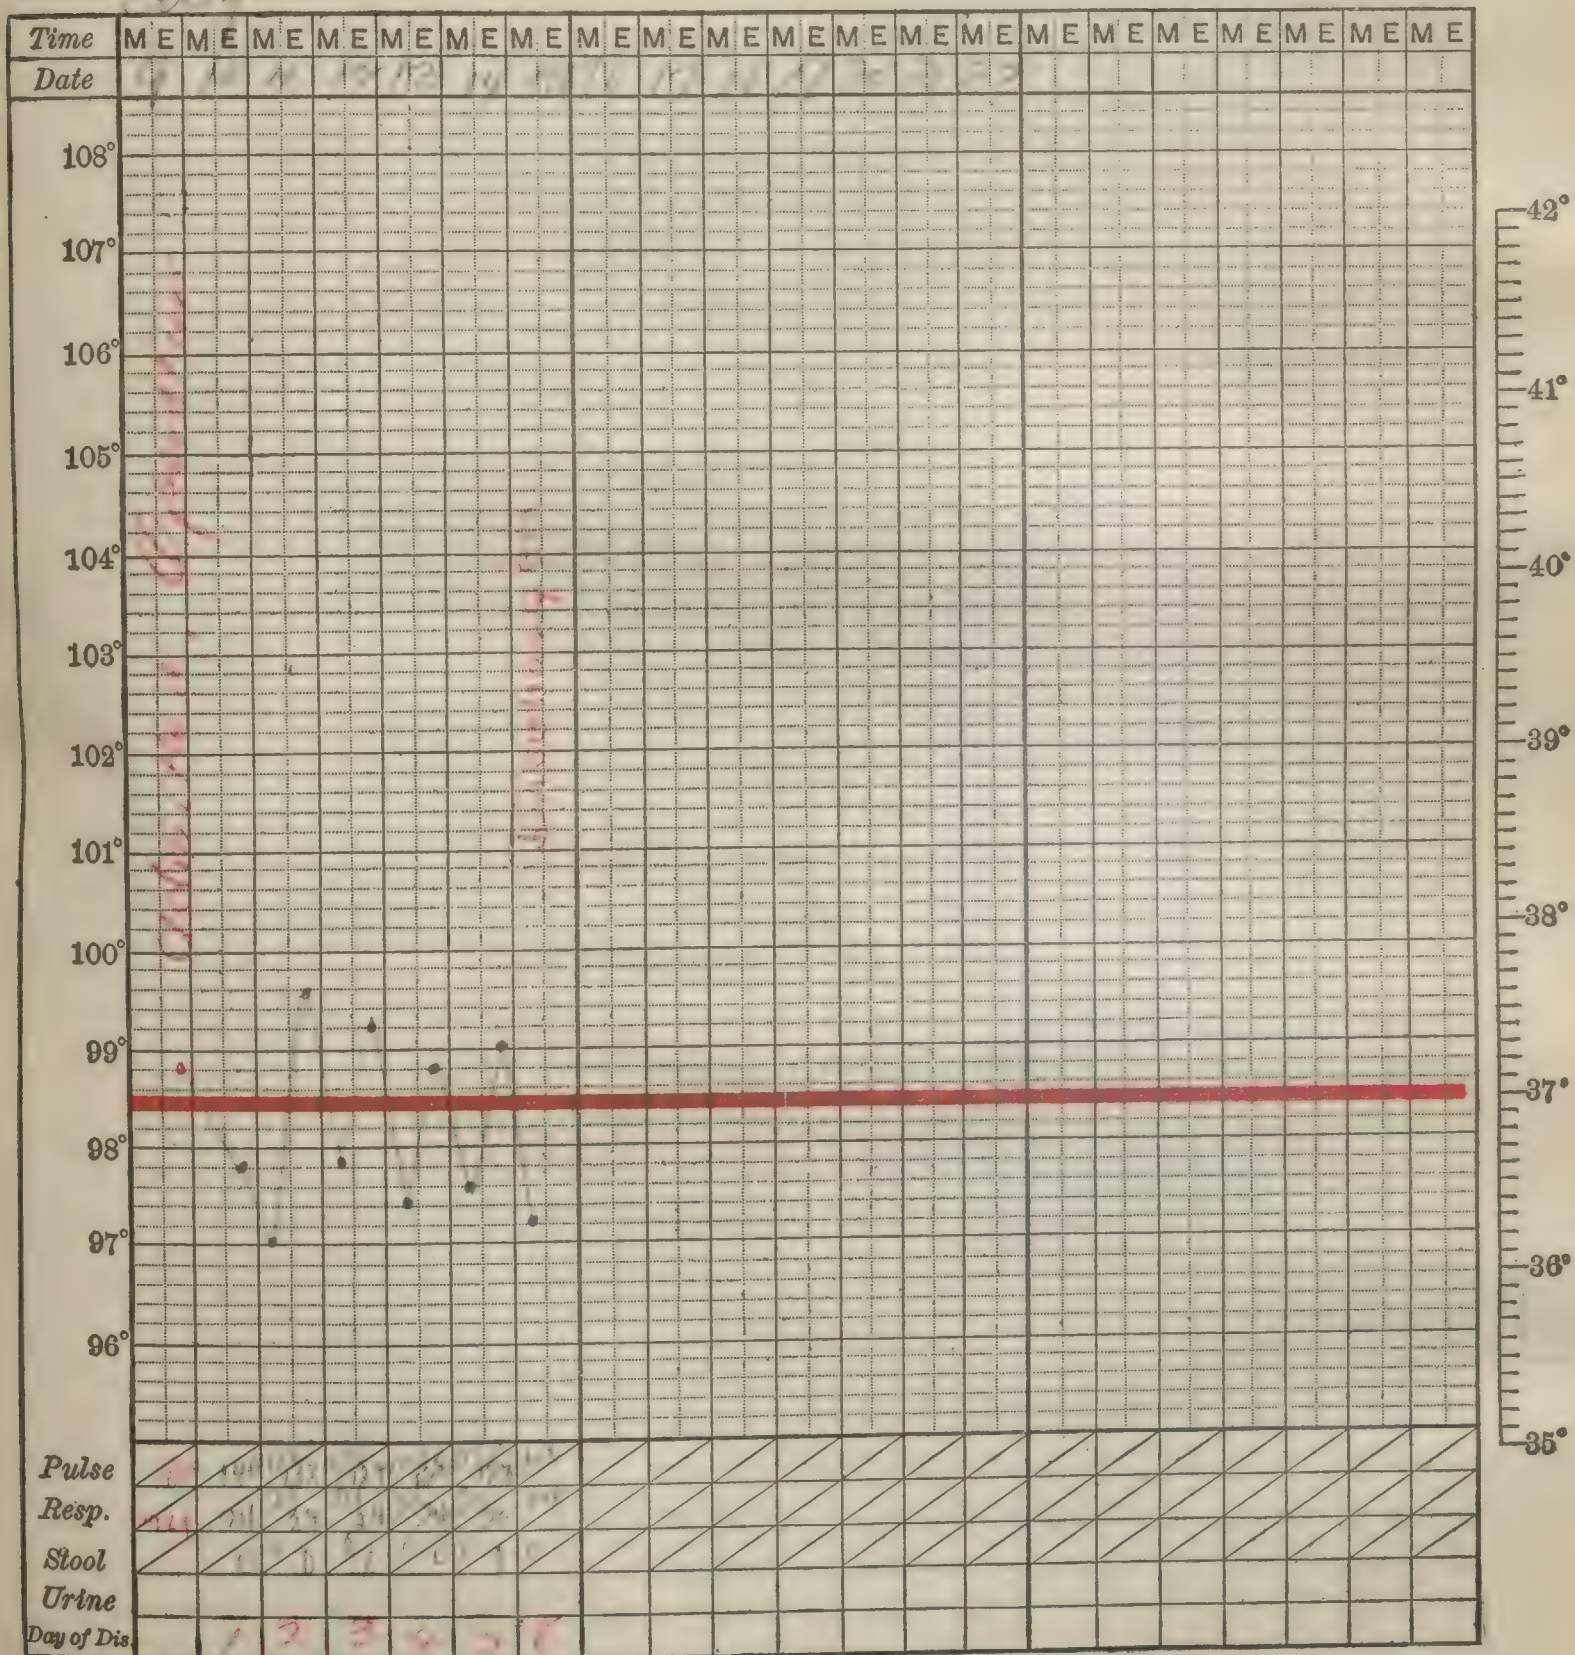

Aug 10/15 1:00 Patient vomits more blood - Clamps
reapplied - condition fair

7:30 Clamps removed all bleeding stopped
pulse rather fast and easily controlled.

Aug 11 - Patient very comfortable - pulse good

Aug 13/15 Patient in excellent condition - allowed up

Date of Discharge: *Oct. 10/15*Clinical Clerk. *J.C.A.*

Treatment & Diary:

Aug 18/15 Simple mastoid operation Rt.
Dr. Jamieson -
Ethel Dr. Morris

An operation in all respects similar to the one performed on the left was carried out, excepting lateral sinus was not exposed.

Aug 20/15 Leg (left) put up in plaster &石膏
chloroform Dr. Morris
Aug 23/15 Dressing changed on both mastoids
rather profuse discharge

Aug 23 Dressing changed - wounds lightly
packed & iodoform.

Aug 25 Dressing changed - no packing - wounds
granulating from below upward -

Sept 2 - Wound dressed on alternate days
Condition very good - Slight discharge
from Rt ear

Sept 4/15 Lower Rt molar extracted under gas

Sept 9/15 wound dressed on alternate days. Patient
complains of much pain on Rt side of head
& face. nothing abnormal on physical exam.
Wound clean - excessive granulations cauterized
w/ CuSO₄.

Sept 11/15 Temperature 100.2 Patient feels generally
miserable - much discharge from Rt ear
Syringed daily -

Sept 12/15 Patient much better - allowed up in
wheel chair

Sept 14 - Both ears dressed and condition
excellent. Left ear practically no discharge

Sept 27 Ears & mastoids healed & clean
slight deafness in left ear
Arm dressed - nearly healed

Dr. C. J. ...

DOCTOR'S REPORT

[Faint, illegible text, likely bleed-through from the reverse side of the page]

ROYAL VICTORIA HOSPITAL

No.

Name

Belisle

ac. sup. otit. med. Rt & Lft

Clinical Clerk

gcs.

Diagnosis

ac. mastoiditis Rt & Lft

DATE

Aug. 16, 1915

Operation Simple Mastoid Left

Dr. Jamison

Ether (Jannway apparatus); Dr. Morris

Head prepared in usual manner, shaved 2 in around ears - Iodine wash up.

Both subjective + objective symptoms being more severe on left, that side was opened by a curved incision $\frac{1}{4}$ in posterior to ear and extending from just below the tip of the mastoid to the level of the top of the auricle. Bleeding points secured and mastoid retractor inserted.

The periosteum was elevated exposing the spine of Henle, supraaural ridge and the tip of the mastoid. The outer table chisled away and antrium opened. Very little pus in antrium altho various cells contain much pus and showed signs of active disease. Culture taken.

The mastoid cells were carefully removed w/ chisel + gouge - lateral sinus exposed + found healthy - A larger amount of bone required removal to get beyond the disease than was anticipated. Wound packed w/ iodoform gauze and bandaged.

Condition of patient tho't to warrant delay and right mastoid not touched.

PATHOLOGICAL DEPARTMENT

DISEASE																			

Physical Examination :

Heart lungs & abd. neg

DEPARTMENT *Otolaryn* Royal Victoria HospitalCase No. *6078* Hospital No.

Date of Admission,

Aug. 23, 1913

Name (in full)

Humbly Edmund

Address

2123 Fulham St

Occupation

child

Age

*9*Single, ~~Married~~, ~~Widowed~~

Birthplace

Can

Religion

R. C.

In service Dr.

Jamieson

Recommended by

O.D.

Complains of the following:

aden + Tonsils

History of Development of Present Condition:

admitted for operation

Family History:

✓

Previous Health:

✓

Previous Admissions:

✓

Diagnosis for Indexing:

Ch. Tonsillitis

Operation or Treatment:

*Adenoidectomy**adenoids**Tonsillectomy*

Detailed Diagnosis:

Result

Cured

History of Development of Present Condition: *from about age of 6, pati. +*
stinks following her attacks of measles, then
was kept a discharge from the left ear.
at this time there was an operation perform
on the ear probably a paracentesis. The discharge
is of a yellow green and foul odor. one year ago
there was some hemorrhage from the ear + she
sought treatment. Deafness has persisted more
or less since childhood - grown worse lately
no tinnitus, no vertigo - no otalgia.

Treatment & Diary:

Aug 26/15 Radical mastoid operation - Dr White
Ether - Dr Morris

The drum membrane was freed from the malleus in order that it might fall over opening of eustachian tube.

The usual skin incision was made, periauricular and the spine (supra meatal) and canal discerned. The bone was carefully chiseled away exposing the antrum, the aditus and middle ear. The parts were carefully curetted leaving no overhanging edges of bone - Special care being taken to avoid the facial (VII) nerve.

A plastic operation done on ext. and. Canal. Sigmoid gauze packed thru the plastic - Ext. wound closed with 3 silk woundgut suture. Small piece of gauze inserted to allow drain.

Aug 28 - Wound dressed - drop of pus at lower end of wound - Suture & gauze removed - small strip of gauze inserted. Patient feeling very well. No temperature no pain.

Aug 31/15 Remaining sutures removed - Patient complains of darting pain at times.

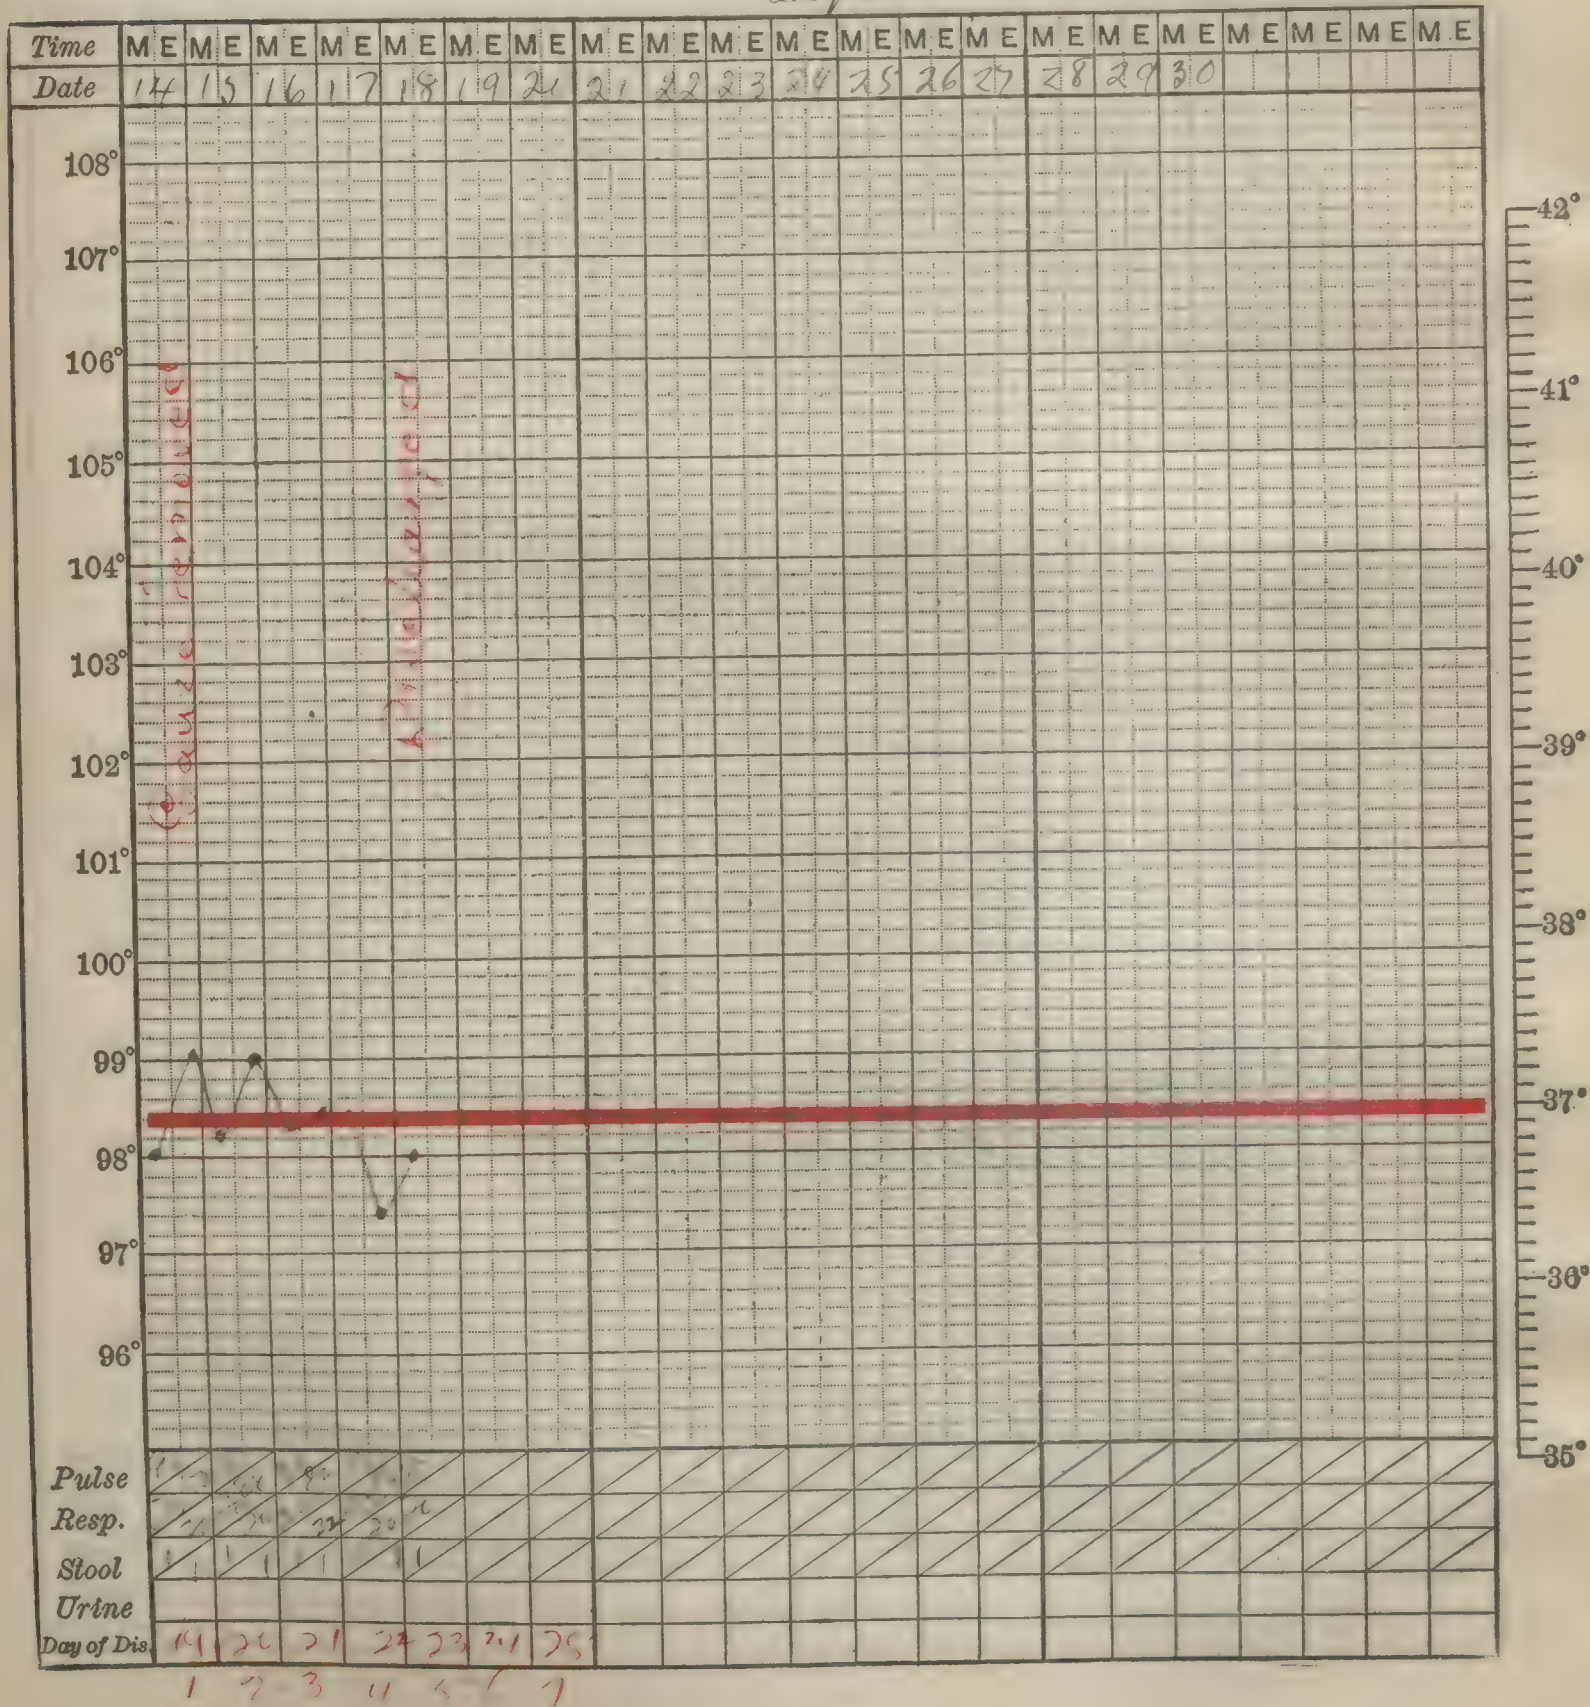

Sept 2/15 Gauze plug removed from plastic wound flaps in good position and healing well. Bone plug inflated and dry dressing applied.

Sept. 7/15 Syringed w/ H_2O_2 considerable discharge.

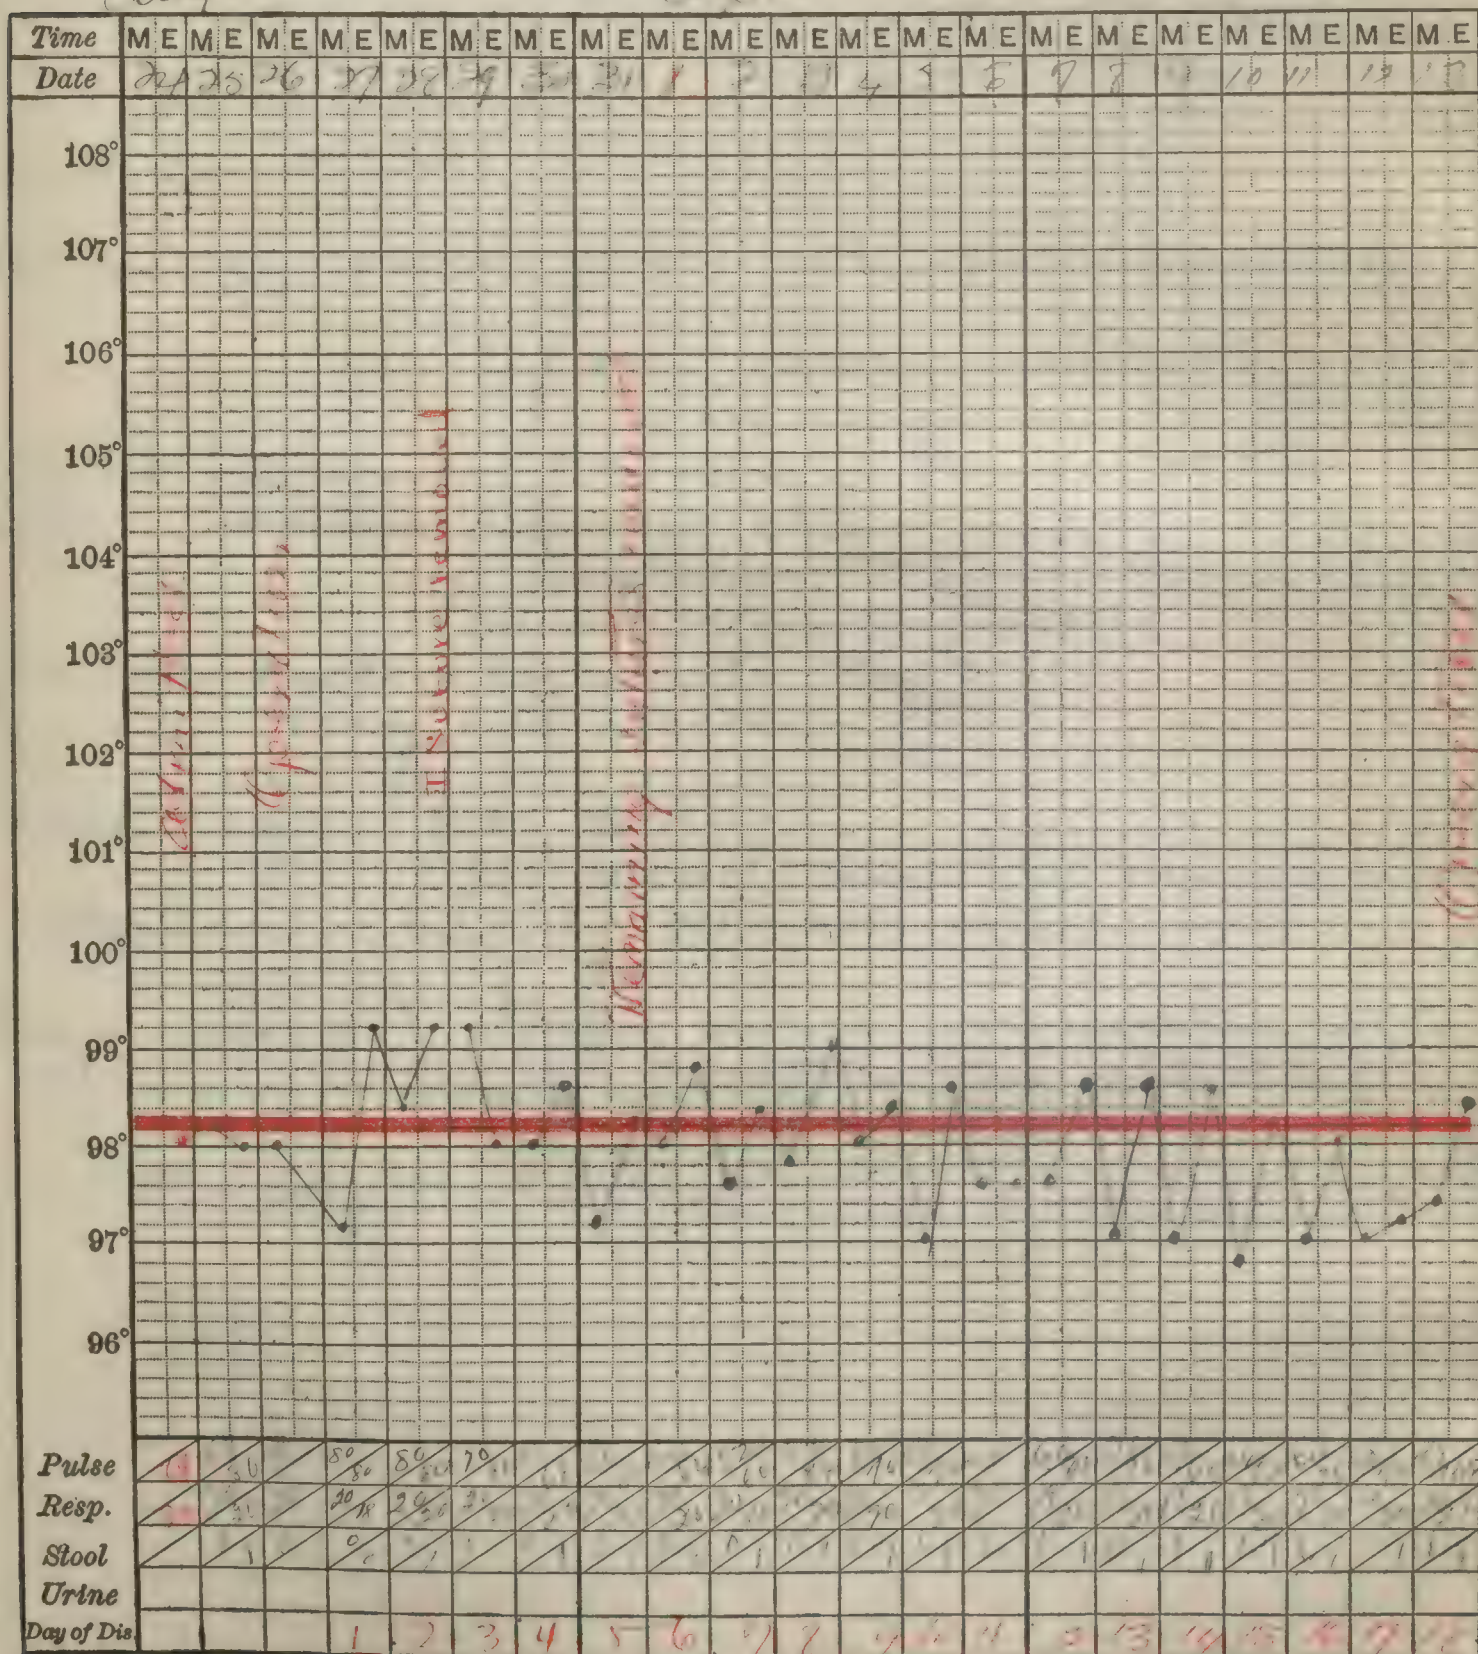

Sept 12 - Ear looking very well - very little discharge which is essential to heal. As there is a deviation & septal spur on left it is thought advisable to remove it.

Clinical Clerk: G.C.A.

Treatment & Diary:

Aug 25/15 Double Radical Antrum operation
Dr Garrison
Ether Dr Morris

The usual Caldwell Luc operation was done on both sides - viz: an opening established thru the nasal wall of the antrum thru which much diseased tissue was removed. The left contained thick inspissated pus. A permanent opening was made into the nose a light gauze pack introduced from left nostril to left antrum - Both wounds closed & silk work put.

Aug 26/15 Throat very sore - very restless at night
Gauze removed from left nostril

Aug 30/15 Sutures removed from Rt side

Aug 31/15 Sutures removed from Lft side - Antrum irrigated - fluid returned very clear.

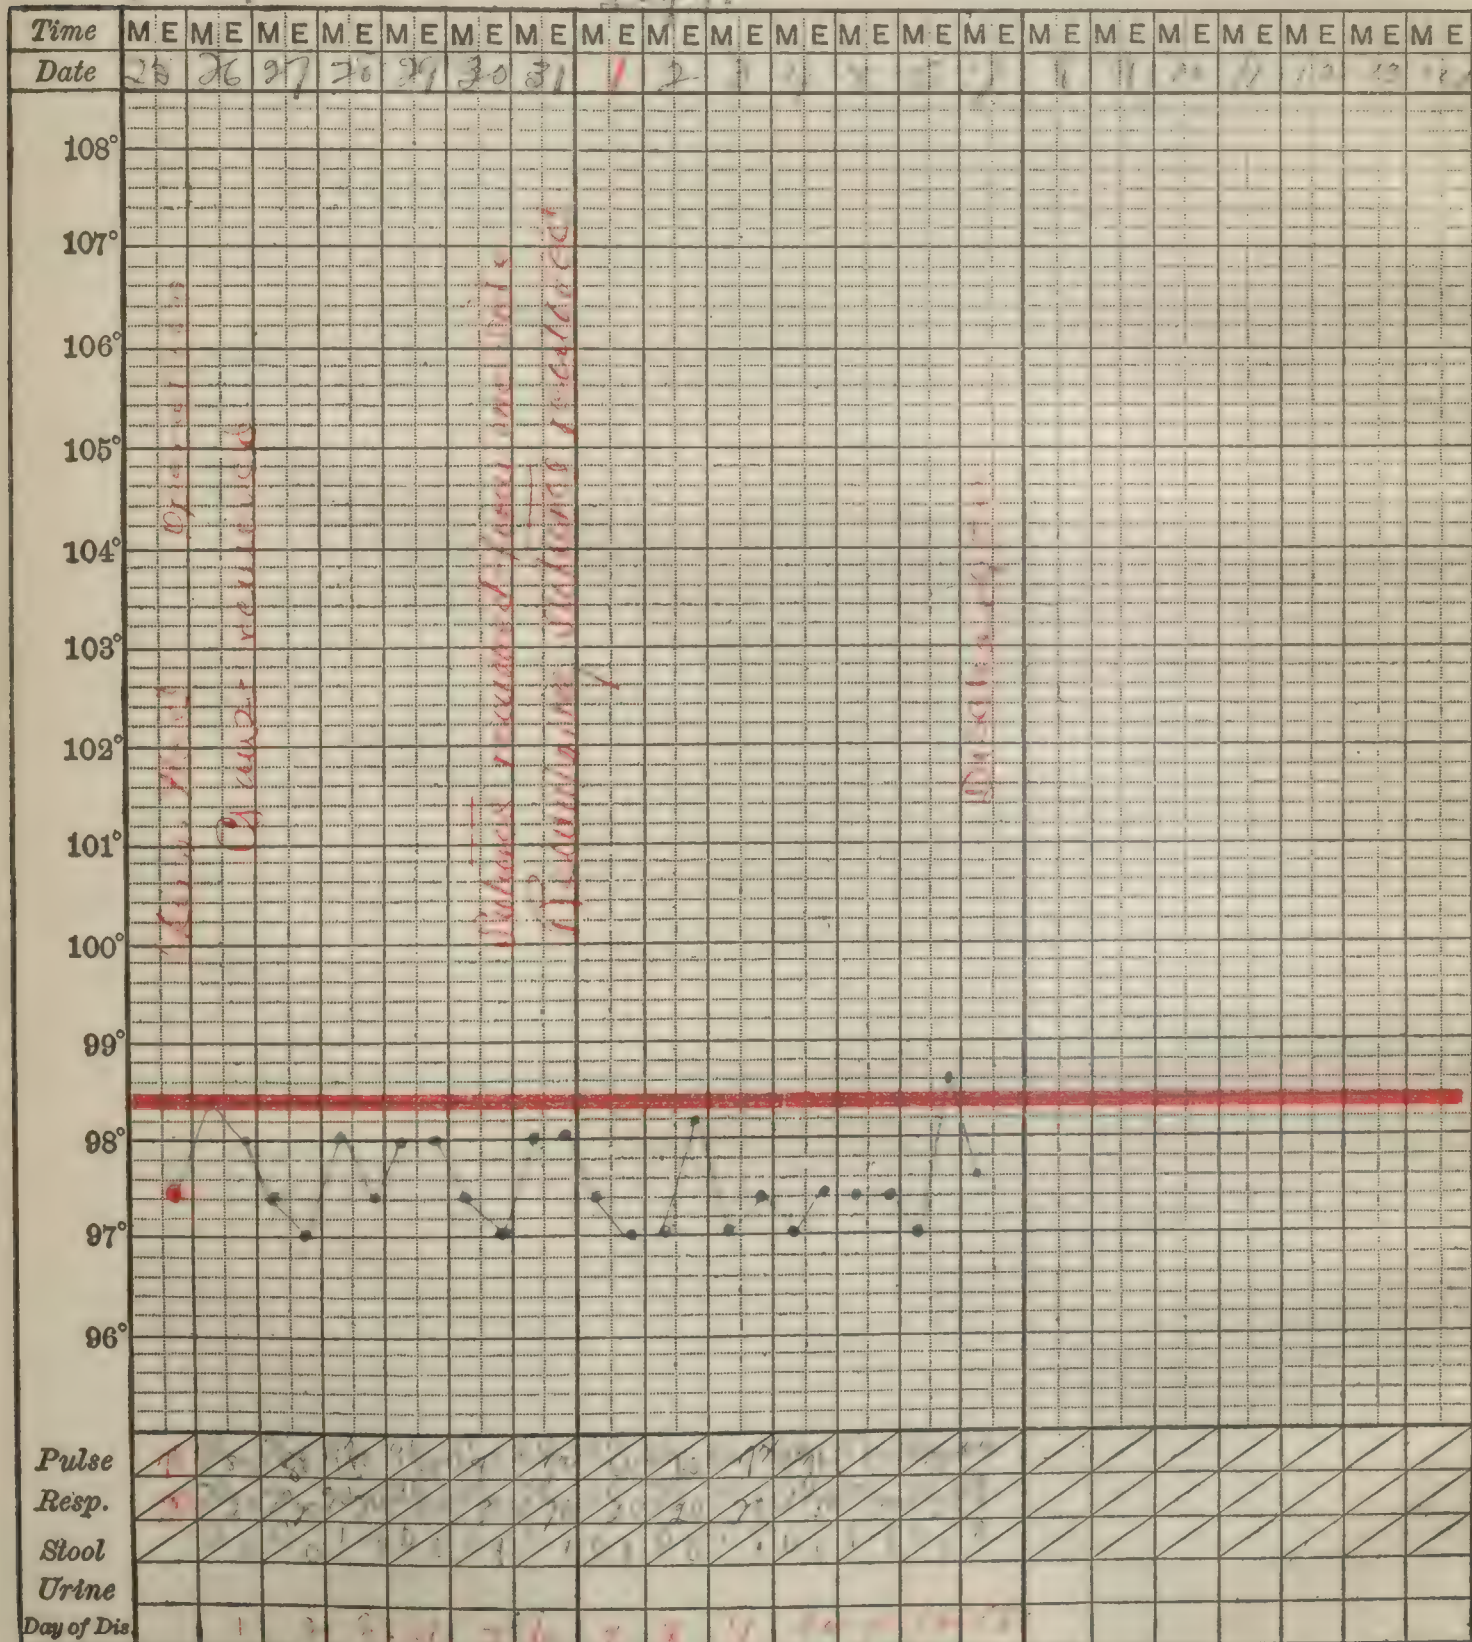

Sept 7/15 Discharged
